

distributed programming environments. Dynamics have been proposed as a language construct for dynamic typing, based on experience with languages such as CLU, Cedar/Mesa, and Modula-3. However proposals for incorporating dynamic typing into languages with parametric polymorphism have serious shortcomi ...

IONA released the first full implementation of the CORBA standard in August 1992, and

our first product, Orbix, has become the most successful object request broker, capturing almost 70-percent of this market. It has spawned many follow-on products from IONA and from partner companies. This development followed nearly ten years of research in the area of distributed object systems within Trinity College Dublin, centered on language support for developers of distributed systems. Th ...

ML-style modules are valuable in the development and maintenance of large software systems, unfortunately, none of the existing languages support them in a fully satisfactory manner. The Official SML'97 Definition does not allow higher-order functors, so a module that refers to externally defined functors cannot accurately describe its import interface. MacQueen and Tofte [26] extended SML'97 with fully transparent higher-order functors, but their system does not have a type-theoretic semantics ...
